

Task 1: Abstract

Date

Topic: Palm oil in Malaysia: The New Age

Goal:

- Visualize relationship between Malaysia's palm oil production and forest loss across state and time
- Show the decoupling of production growth from primary forest loss since 2016
- Progress of forest conservation across state.
- Regulations and market pressure driving the shift

Target Audience:

- Locals (Malaysians) familiar with palm oil as a national industry but unsure whether the palm oil to deforestation storyline still holds true.
- Consumers and tourists who encounter palm oil daily (cooking oil, filler in snacks) without knowing where it comes from.

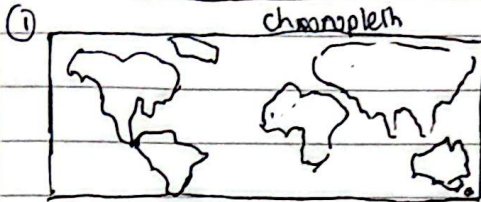

Sections:

- Introduction: How Malaysia contributes to the world's palm oil supply
- Where Palm oil grows: Planted Area & Forest loss across states.
- Decoupling (Unexpected): Production rising but forest loss falls
- ~~Green Growth~~ → States greening compared to others.
- Pressure: Buying demand v/s regulation constraints.
- What to watch: States still cleaning today

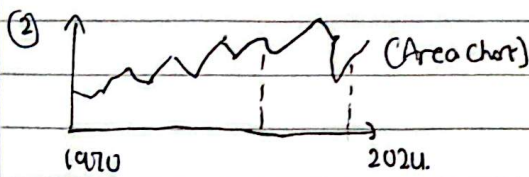

Palm Oil in Malaysia.

Growth, Deforestation and Decoupling

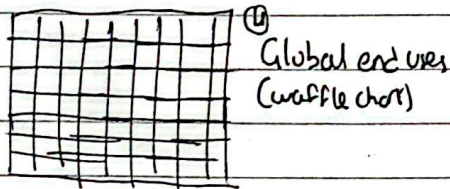

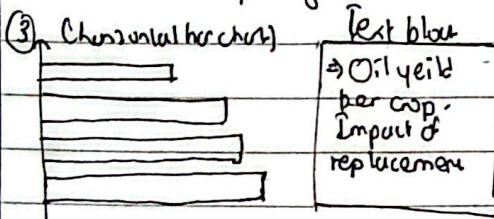

Section 1: The world runs on it

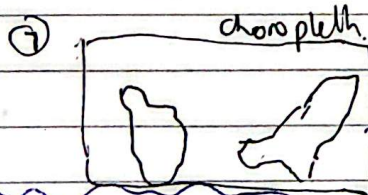

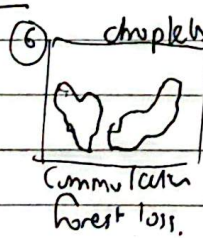

Production by country

Half a century of growth.

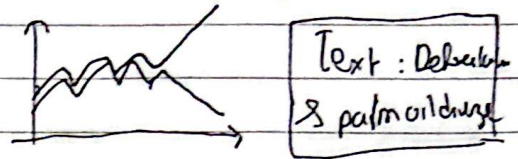

Section 2: Where Palm oil lives in Malaysia.

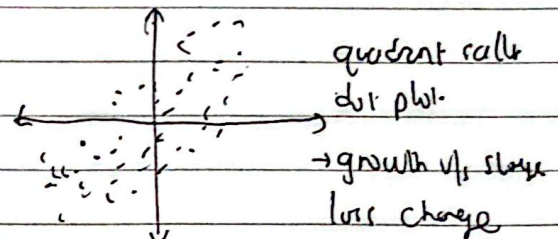

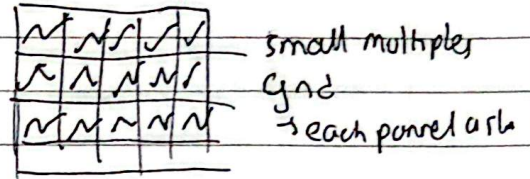

2 palm intensity x/y x forest loss

(3 or 3 color multi)

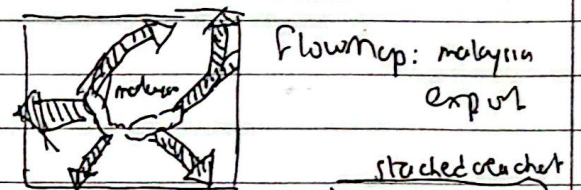

Section 3: Something changed in 2016.

Uneven disparity between consensus & palm oil production.

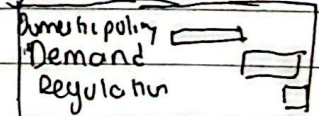

Section 4: Who is pushing the industry

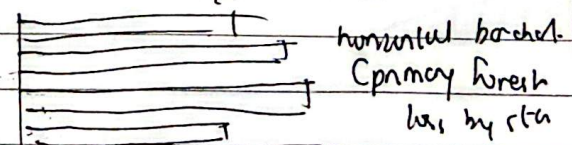

Malaysia gaining value from oil

Swim lane timeline

Section 5: Stay Not over

flaring statement Text
